Magnetic Force

1. What is magnetic force? Do all materials experience this force?

Ans: Yes, due to which magnetic materials are attracted to each other.
Not all materials experience this force.

2. What does the term 'poles of a magnet' mean?

Ans: The end of a magnet are called poles. All magnets have two poles.
The magnetic force is stronger at the poles.

3. Read the passage below and fill in the blanks with the correct words given in the boxes.

attract

like

repel

two

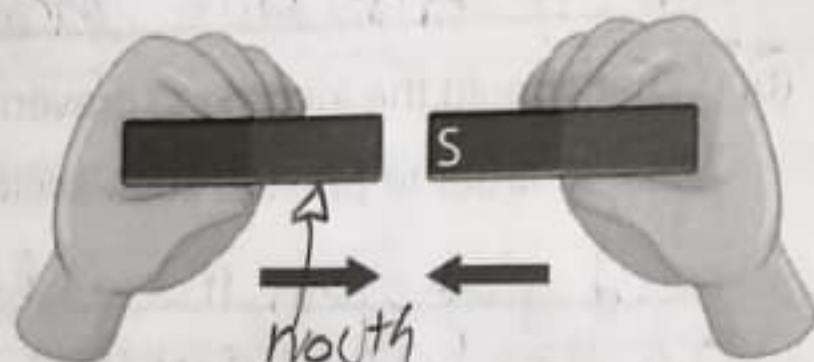

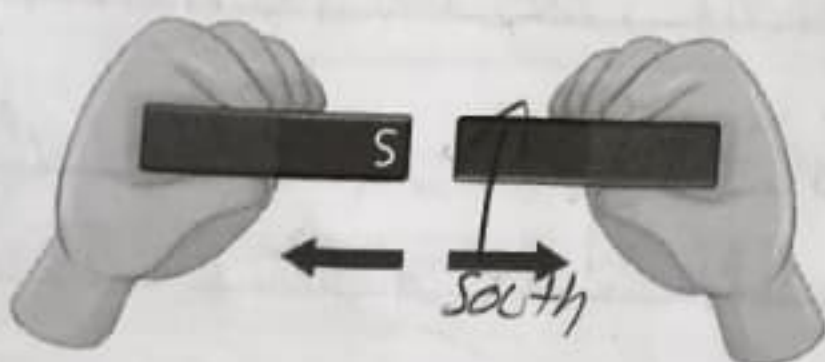

poles

strongest

unlike

The ends of a magnet are called poles. All magnets have two poles. The magnetic force of a magnet is the strongest at its poles. If the like poles of two magnets are placed close to each other, they repel or move away from each other. If the unlike poles of two magnets are placed close to each other, they attract or move close to each other.

Observe the images below showing two magnets being brought close to each other. One pole of a magnet has been labelled in each image. Identify and label the other poles.

Let's Work Together

Take a magnet and hang it by a thread so that it is free to move. When the magnet stops moving, observe the direction in which the magnet's north pole is pointing. Now, move the magnet slightly. Does the magnet stop in the same position as before? Record your observation and conclusion in the table below.

What did you observe?

The magnet's north pole stops

Give a reason for your observation.

Ques 2 Write any two things we can do with our mobile phones easily.

Ans Following are the two things we can do with our mobile phones:

- Ordering food
- Shopping for clothes.

Ques 3 Do you think a mobile phone is like a genie? why?

Ans I think a mobile phone is like a genie because like a genie, when we

ask a question, it has the answer. Also if we have a problem, it gives us a solution right away.

es 3 What do you think the author thinks
about mobile phones?

I think the author thinks that while
mobile phones have made life easy it
is upon us to use them responsibly. He
writes that we can use them to connect
with people far away, but we should not
use them to disconnect ourselves from the

Word

Meaning

Conversation = a talk between two or more

people

impossible = something that cannot happen

or exist

fetch = to go and bring something back

neighbours = people living next door

nearby

expensive = costing a lot of money

clutches = to grasp or to hold

Factors Affecting Friction

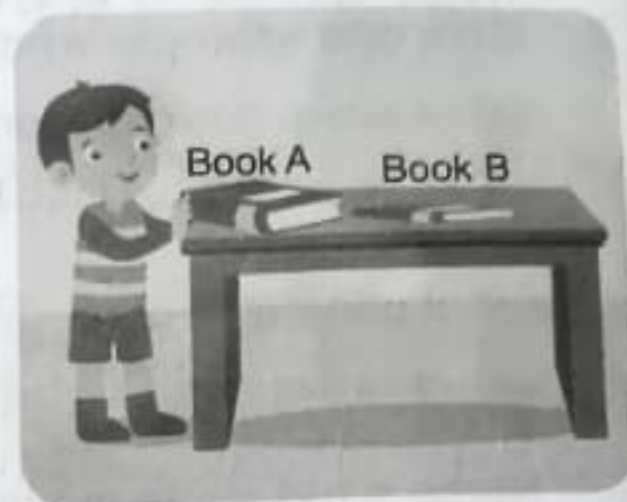

1. State whether the following statements are true or false:

- (a) Friction does not depend on the amount of force between the surfaces.
- (b) A rough surface produces less friction than a smooth surface.
- (c) A heavy object experiences more frictional force.
- (d) We need to use more force to push an empty shopping cart.

False
False
True
False

2. John placed Book A and Book B on a table and tried to slide them by applying force. Which book would require more force to slide on the table? Explain.

Ans: Book A would require more force to slide on the table because it is heavier than Book B. As the table would experience more friction than Book B.

Effects of Friction

3. Put a tick mark against the images that show the effects of friction.

☒ Diwali sparkler

☒ Worn-out shoe soles

☒ Worn-out tyres

☒ Lit matchstick

4. What are the two effects of friction? Give examples.

Ans: The two effects of friction are as follows.

Friction produces heat. For example when we rub our palms together, the heat generated due to friction.
Friction causes wear and tear. For example the soles of our shoes and tyres become thin with use over time. This happens because of friction between them.

Factors Affecting Friction

1. Read the passage below and fill in the blanks with the correct words given in the boxes.

harder	rough	force	smooth	more	types of surfaces	heavy	less
--------	-------	-------	--------	------	-------------------	-------	------

Friction between two objects is not always the same. The amount of friction between two objects depends on factors such as the types of surfaces and the amount of force between surfaces. A rough surface has more irregularities, and therefore, it creates more friction. A smooth surface has less irregularities. Therefore, it creates less friction. It is difficult to push a heavy object as it presses harder on the surface and creates more friction.

Let's Work Together

Fill in the observation table based on the experiments done in the class.

Experiment 1: Toy Car		Cardboard	Sandpaper
Prediction	On which surface do you think the toy car will experience more friction?		I think the toy car will experience more friction on the sandpaper.
	Give a reason for your prediction.	The sandpaper is rougher than the cardboard.	The sandpaper is rougher than the cardboard.
Observation	On which surface did the toy car experience more friction?		The toy car experienced more friction on the sandpaper.
	Give a reason for your observation.	The sandpaper was rougher, with more irregularities. Hence it created more friction.	The sandpaper was rougher, with more irregularities. Hence it created more friction.
Conclusion	What did you find from this experiment?	The sandpaper	The sandpaper
Experiment 2: Carton		Empty Carton	Carton Filled with Books
Prediction	Which carton do you think will move easily?	I think the empty carton will move easily.	The carton filled with books is heavier than the empty carton.
	Give a reason for your prediction.	The empty carton is lighter than the carton filled with books.	The carton filled with books is heavier than the empty carton.
Observation	Which carton moved easily?	The empty carton moved easily.	The carton filled with books needed more force to move than the empty carton.
	Give a reason for your observation.	The empty carton is lighter than the carton filled with books.	The carton filled with books needed more force to move than the empty carton.
Conclusion	What did you find from this experiment?	I found that friction depends on the weight of the object. Heavy objects press harder and experience more friction than light objects.	I found that friction depends on the weight of the object. Heavy objects press harder and experience more friction than light objects.

- they had a touchscreen.
 - they allowed access to the internet?
- Q: Why are the 4G phones better than all previous generations of phones?
- A: 4G phones are better than all previous phones because they allow faster internet connectivity. Information flows so fast that we can locate people in seconds.
- Q: What do you think is the meaning of the word amazing?
- A: The meaning of the word amazing is very impressive or excellent.

How Mobile phones Have
changed the world

Ques

What is the main idea of the article?

Give reasons for your answer

Ans

The article is about how Mobile phones

have changed and helped us do more ☒

Ans

The article is about how mobile phones

have changed the world and helped us

do more. This is because in the article

we talk about the different ways in

which mobile phones have made our

lives easier.

Let's Connect Back

1. What is force?

Ans: Thrust or pull applied on an object is called force

2. Look at the images given below. Identify and write the type of force being used in each of them.

Swinging on a swing

Muscular force

A magnet attracting a nail

Magnetic force

Lifting a box

Kicking a football

A ripe apple falling from a tree

Gravity force

Lighting a matchstick

Frictional

3. Circle the contact forces and tick the non-contact forces.

Frictional force

Magnetic force

☒ GravityMuscular force

4. Why do we need energy? Name any two forms of energy that we use in our daily lives.

Ans: We need energy to do various activities in our daily lives. Two forms of energy that we use in our daily lives are heat and light energy.(Accept any correct form of energy)

Let's Think

You already know a lot about force and energy. Write one question you have about force and one question you have about energy.

Question 1: Why am I not able to move a heavy object like a car even if I apply a lot of force?Question 2: How does my house get electricity?

Synonym = same

Date: 24/1/2026
Page: 85

Synonym means the same. A word or a

phrase that means exactly or nearly

the same as another word or phrase

is called its synonym.

ex- chatting - talking

brawl - fight

Discuss with your partner and

write the missing verbs.

Past Tense * Present Tense Future Tense

write write will write

asked ask will ask

draw draw will draw

ate eat will eat

~~Pulled Pull pull~~

to take to take to take

to take to take to take

Antonyms

WS 18

1. Read the following sentences, underline the words that are opposite in meaning, and write them in the space below.

- I had a dry towel. However, after I wiped myself, it became wet.
dry - wet
- We could hear the loud thunder in the quiet town.
loud - quiet
- I don't like coffee because it is bitter, but I like chocolate because it is sweet.
bitter - sweet
- It was a very long story. He had to make it short.
long - short
- There are some huge trees and some tiny plants.
huge - tiny
- I had a sharp pencil which became blunt after I used it.
sharp - blunt
- I found the exam difficult, but Adam thought it was easy.
difficult - easy
- My mother asks me to keep my room clean every time it gets dirty.
clean - dirty

Google Apps

2. Watch the video and answer the following questions in your notebook.

- Name any three apps that you can use with a Gmail account.
- Which Google app would you use if you wanted to mark and remember important dates?
- What is the main idea of the video? Give reasons for your answer.
- What is the meaning of the word 'device'?
 - a machine made for a purpose
 - a toy made to play with
 - a book with rules in it

Vocabulary words

Word

Meaning

Imagine = to form a Mental image
of something

Stuck = to be fixed on something

genies = Spirits with special powers

usually Mentioned in Arabian
Stories

Cigines = food cooked in a certain

way

accessories = small things added

to make another thing more

useful or beautiful.

Friction

1. What is friction? Give two examples of friction.

Ans: Friction is a force that acts between two surfaces and opposes the movement between them. Examples of friction.

1. Friction between the floor and a box when we push the box. 2. Friction between grass and ball rolling on the grass.

		
Pushing a cart	Pushing a box	Driving a car

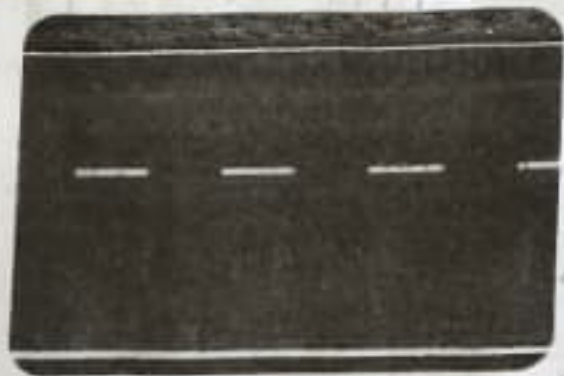

3. Radhika kicked a football with a lot of force. The ball rolled for some time and then stopped on its own. Can you explain why this happened?

(Writing tip: Start your answer with 'The ball rolled for some time and then stopped on its own because...')

Ans: The ball rolled for some time and then stopped on its own because of the force of friction between the surface of the ground and the ball. This force acts in a direction opposite to the motion of the ball, therefore stopping it after some time.

Factors Affecting Friction

4. Label the surfaces shown below as 1, 2, or 3 in order from the lowest friction to the highest. (1 is the lowest and 3 is the highest.)

Tar road

2

Marble floor

1

Muddy road

3

responsibly = in a sensible or trustworthy

manner

disconnect = break the connection.

Vocabulary Words

Word

Meaning

information = facts about something or

Someone

innovations = new methods or ideas
